

Hackathon for Beginners

Food Panda Customer & Admin App

Langugages: HTML, CSS, JS

UI Library: Any

Storage: Local Storage

Duration: 8 hrs

Deliverables:

1. **Share code link:** Upload your code on Github & share the code link in your Hackathon Assignment.
2. **Share deployed link:** Deploy your code on Netlify/Firebase & share the link in your Hackathon Assignment.

Scoring Criteria: Total: 100 marks

- UI (Responsive): 20 marks
- Local storage: 20 marks
- Functionality: 30 marks
- Login/Sign up: 10 marks
- Code Quality: 20 marks

Restaurant Admin Web App Features:

1. **Login/Signup:** Allow restaurant admins to log in to their accounts or create new accounts.
2. **Manage Categories:** Allow admins to create and manage categories for their menu items. This includes adding, editing, and deleting categories.

Example of Categories: Starters, Fast Food, BBQ etc.

3. **Manage Items:** Allow admins to add, edit, and delete menu items for each category. Admins should be able to upload images, specify the item name, description, and price for each item.

Example of Items: French fries, Broast, Chicken Tikka etc.

Customer Web App Features:

1. **Login/Signup:** Allow customers to log in to their accounts or create new accounts.
2. **View Restaurants:** Display a list of all available restaurants.
Bonus: Customers should be able to search, and sort restaurants based on ratings & alphabetical order.
3. **View Menu:** Allow customers to view the menu for each restaurant. The menu should be categorized based on the items added by Restaurant Admin.
4. **Add to Cart:** Allow customers to add items to their cart from different restaurants. If the customer navigates back to the menu of a different restaurant, the cart should be automatically emptied. Customers should be able to modify their cart by adding or removing items.

5. **Checkout**: Allow customers to proceed to checkout once they have finalized their order. The checkout process should include a summary of the items in the cart, the total cost, and a UI for payment gateway for card payments, payment functionality not required.

Best of luck!
